Answers and talk notes

Math is Mine

What your student is learning

Tonight we look back at the very first lesson of the year and describe how our math story has grown.

Answers

Ask your student to explain before you look.

1. Your September estimate, 20 × 4 = about 80 riders, is the first page of your math biography.
2. Looking at your Ferris wheel estimate and saying what you would add now is to reflect.
3. In September: 20 × 4 = about 80 riders. Now: 80 × 6 = about 480 riders an hour. That change is growth.
4. Starting a Ferris wheel problem before you are sure it will work shows confidence.
5. The Ferris wheel at the fair is math in your community.

Talk about it

What is one thing you can do now that you could not do in September?

Home mission

Fold a sheet of paper in half. On the left side, write one thing you could do in math in September. On the right side, write one thing you can do now. Ask your student to read both sides out loud.

When they are stuck, ask

- What can you do now that was hard before?
- Which lesson do you remember most?
- How would you explain that to someone younger?

Try not to say

- You should have learned more this year.
- This assignment is not real math.
- Just write one sentence and be done.
