Understand Statistical Questions

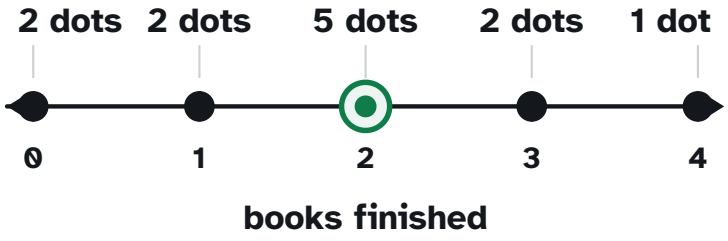
Draw every answer as a dot on a number line and describe the shape.

Name _____ **Date** _____

Tonight's spark

At the library, twelve students told how many books they finished: 0, 2, 1, 2, 3, 2, 4, 1, 2, 3, 0, 2. Which number of books did the most students say?

Make a guess first: was it 0, 2, or 4 books?



Our class model: one dot for every answer

Try it

Work it out on paper. Write one answer on each line.

1 **In a dot plot, what does each dot stand for?**

A. One answer from the data **B.** The total of all the answers **C.** The name of a group
D. The tallest stack

My answer _____

2 **Data: 1, 2, 2, 2, 4. How many dots go above the number 2?**

A. 1 **B.** 2 **C.** 3 **D.** 5

My answer _____

3 **The tallest stack of dots is above 5. What does that tell you?**

A. 5 is the greatest value **B.** 5 is the most common answer **C.** There are only 5 dots
D. 5 is the middle of the number line

My answer _____

4 **A dot plot has stacks of 2, 4, and 3 dots. How many students answered?**

A. 9 **B.** 3 **C.** 4 **D.** 24

My answer _____

5 **The data are 3, 5, 5, 8. Which number line is the best start for a dot plot?**

A. Only 3, 5, and 8 labeled **B.** From 0 to 100 by tens **C.** From 3 to 5
D. From 3 to 8, with every whole number labeled

My answer _____

Talk about it

Which answer has the tallest stack, and what does that tell us about the group?

Home mission

A different situation: Ask each person at home how many glasses of water they drank today. Lay a paper strip numbered 0 to 5 on the table. Use a coin as a dot for each answer, stacked above its number. Which number has the tallest stack?

If we get stuck, ask

- What does one dot on this plot stand for?
- Which stack is tallest? What does that tell us?
- Do the two sides of the peak look about the same?

Do it on a screen
Scan or type the link. Same lesson, with hints.
