Describe Data Using the Mean

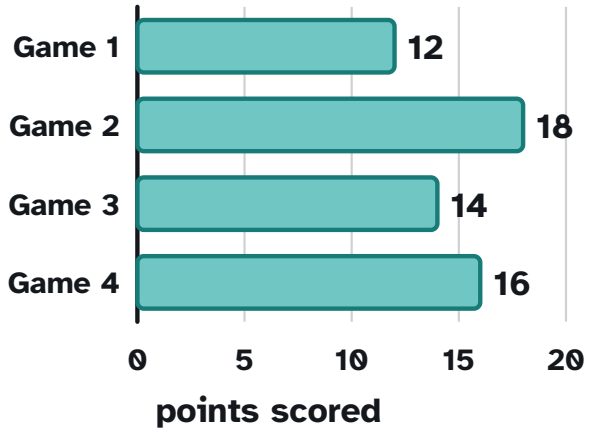
Find a missing value when you know the mean you want.

Name _____ **Date** _____

Tonight's spark

A player scored 12, 18, 14 and 16 points in four games. She wants a mean of 16 after five games. How many points must she score in game five?

Guess first: will she need more than 16 points, or fewer?



Our class model: the target total

Try it

Work it out on paper. Write one answer on each line.

1 **You want a mean of 10 over 3 games. What total do you need in all?**

A. 30 **B.** 13 **C.** 3.3 **D.** 7

My answer _____

2 **The target total is 60 and you already have 45. How much more do you need?**

A. 105 **B.** 15 **C.** 60 **D.** 45

My answer _____

3 **A student scored 4, 7, 5 and wants a mean of 6 over four quizzes. What does the fourth score need to be?**

A. 6 **B.** 16 **C.** 8 **D.** 24

My answer _____

4 **A player scored 12, 18, 14, and 16 points. She wants a mean of 16 over five games. How many points must she score in game 5?**

A. 16 **B.** 60 **C.** 80 **D.** 20

My answer _____

5 **Five numbers need a mean of 12. Four of them are 10, 14, 9, and 13. What is the fifth number?**

A. 12 **B.** 14 **C.** 46 **D.** 60

My answer _____

Talk about it

How does a target mean become a target total?

Home mission

Pretend your family wants a mean of 6 glasses of water a day for 4 days. Days 1 to 3 were 5, 7 and 4. Ask your student how many glasses day 4 needs.

If we get stuck, ask

- If the mean is a fair share, what would the total have to be?
- How many values will there be when we are done — including the new one?
- Put your answer back in. Does the mean come out right?

Do it on a screen

Scan or type the link. Same lesson, with hints.
