Determine Equivalent Ratios Using Tables

Find a missing value in a ratio table by multiplying or dividing both numbers.

Name _____ **Date** _____

Tonight's spark

An art room mixes orange paint with 4 cups of red for every 3 cups of yellow. Today there are 6 cups of yellow. How many cups of red go in?

Make a guess first: will the red be more than 4 cups, or less?

Red (cups)	Yellow (cups)
4	3
?	6

×2

Our class model: the same move on both numbers

Try it

Work it out on paper. Write one answer on each line.

1. **A table has the row 6:9. Divide both numbers by 3. What is the new row?**

   A. 3:6 **B.** 2:6 **C.** 2:3 **D.** 3:2

   My answer _____

2. **The ratio is 5:2. Find the missing number in 20 : ?**

   A. 17 **B.** 8 **C.** 40 **D.** 4

   My answer _____

3. **A ratio is 12 red : 8 blue. How many red go with 2 blue?**

   A. 10 **B.** 6 **C.** 3 **D.** 24

   My answer _____

4 **Go from 3:4 to 9:?. What is the missing number?**

A. 12 **B.** 10 **C.** 16 **D.** 3

My answer _____

5 **Go from 9:6 down to 3:?. What is the missing number?**

A. 6 **B.** 3 **C.** 18 **D.** 2

My answer _____

6 **A table has 3:7 and 6:14. If you multiply the first row by 3, what is the next row?**

A. 9:21 **B.** 9:10 **C.** 9:14 **D.** 3:21

My answer _____

Talk about it

In each row, what did you do to the first number, and did you do the same thing to the second?

Home mission

Pick any recipe with two amounts, like 1 cup of rice to 2 cups of water. Ask your student to make half a batch, then three batches, saying both new amounts out loud.

If we get stuck, ask

- What number was one part of the ratio multiplied or divided by?
- Now do exactly that to the other part.
- Can you check your answer by scaling back to the original ratio?

Do it on a screen

Scan or type the link. Same lesson, with hints.
