# Answers and talk notes

Understand Percent

### What your student is learning

Tonight we work with percents greater than 100% — what "150% of the goal" or "2.5 times as much" really means.

## Answers

Ask your student to explain before you look.

1. **B.** 150%. 1.5 is 150 hundredths, so it is 150%. One whole is 100% and a half is 50%.
2. **C.** 125%. One whole is 100%. Only 125% is bigger than 100%.
3. **C.** 200%. Each whole is 100%, so two wholes are 100% + 100% = 200%.
4. **B.** 250%. 25 is 2.5 times 10, and 2.5 times 100% is 250%. Sam read two wholes and a half.
5. **A.** 3. Each 100% is one whole, so 300% is 3 wholes.
6. **B.** 30. 200% is two wholes, so 2 × 15 = 30.

### Talk about it

Which amount is the goal (100%)? Is the new amount more or less than that whole?

### Home mission

Hold up one glass of water and call it 100%. Ask your student: if I pour 1 and a half glasses, what percent is that? What about 2 glasses? 2 and a half?

### When they are stuck, ask

- What is the whole here? What counts as 100%?
- Is the amount more than one whole or less?
- How many full bars would you draw, and how much of another?

### Try not to say

- A percent can never be more than 100.
- 150% of the goal means 150 points.
- 7 out of 10 is 7%.
