Estimate the Percent of a Number

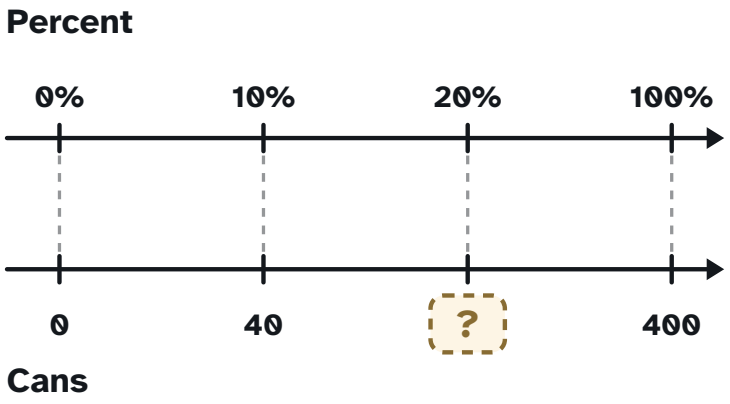
Estimate a percent of a number, and say if the estimate runs a bit high or low.

Name _____ **Date** _____

Tonight's spark

A food drive receipt says 412 cans came in. 18.5% were soup. About how many cans of soup is that?

Make a guess first: is it more or less than 100 cans?



Our class model: round, then lean

Try it

Work it out on paper. Write one answer on each line.

1 **To estimate 18% of 412, which benchmark percent is best to use?**

A. 10% **B.** 50% **C.** 25% **D.** 20%

My answer _____

2 **Which compatible number is best for 412?**

A. 500 **B.** 400 **C.** 41 **D.** 4,000

My answer _____

3 **What is 10% of 300?**

A. 30 **B.** 3 **C.** 300 **D.** 3,000

My answer _____

4 **10% of 400 is 40. What is 20% of 400?**

A. 44 **B.** 20 **C.** 80 **D.** 160

My answer _____

5 **About how much is 20% of 198?**

A. About 20 **B.** About 400 **C.** About 10 **D.** About 40

My answer _____

6 **You estimate 20% of 78 using 20% of 80. Does the estimate run a little high or a little low?**

A. A little low, because 78 is less than 80 **B.** A little high, because 80 is more than 78

C. Exactly right

My answer _____

Talk about it

Which way did you round, and does your estimate run a little high or a little low?

Home mission

Count the cans or boxes in a kitchen cabinet. Round the count to a friendly number. Estimate 20% of it. Does your estimate run high or low?

If we get stuck, ask

- What is 10% of that number?
- What friendly percent is this one close to?
- Which way did you round, and what does that do to the estimate?

Do it on a screen

Scan or type the link. Same lesson, with hints.
