Represent Three-Dimensional Figures in Two Dimensions

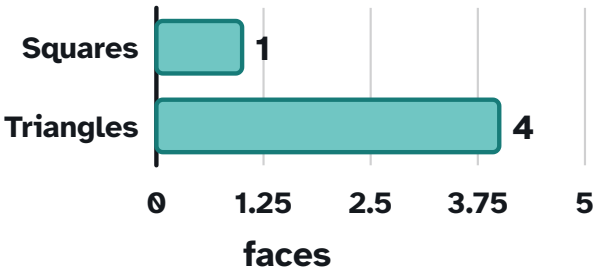
Read a flat net and name the solid it folds into by counting its pieces.

Name _____ **Date** _____

Tonight's spark

A craft kit comes with a flat paper pattern. It has 1 square and 4 identical triangles. You fold it up. What solid do you get?

Guess first: does it have two bases or one?



Our class model: count the bases to name the solid

Try it

Work it out on paper. Write one answer on each line.

1. **How many bases does a prism have?**

   A. One **B.** Two **C.** Three **D.** Four

   My answer _____

2. **How many bases does a pyramid have?**

   A. Two **B.** Three **C.** Four **D.** One

   My answer _____

3. **A net has 4 triangles and 1 square. What solid does it fold into?**

   A. Square pyramid **B.** Triangular prism **C.** Cube **D.** Square prism

   My answer _____

4 **A net has 2 triangles and 3 rectangles. What solid does it fold into?**

A. Triangular pyramid **B.** Rectangular prism **C.** Triangular prism **D.** Square pyramid

My answer _____

5 **A net has 6 rectangles in three matching pairs. What solid does it fold into?**

A. Rectangular pyramid **B.** Rectangular prism **C.** Triangular prism

My answer _____

6 **How many faces does the net of a triangular prism have?**

A. 3 **B.** 4 **C.** 6 **D.** 5

My answer _____

Talk about it

How many bases does the net have, and what shape are they? What does that tell you about the solid?

Home mission

Open an empty box flat and point to its two matching bases. Can your student say how they know this net folds into a prism and not a pyramid?

If we get stuck, ask

- How many pieces match each other exactly?
- Does this solid have one base or two?
- What shape is the base? That goes in the name.

Do it on a screen

Scan or type the link. Same lesson, with hints.
