Answers and talk notes

Fraction Division Practice

What your student is learning

Tonight we bring together everything from 6.1 and 6.2: whole numbers, fractions and mixed numbers all divided with Keep, Change, Flip.

Answers

Ask your student to explain before you look.

1. **C.** 13/5. 2 3/5 = 13/5, because 2 × 5 = 10 and 10 + 3 = 13 fifths.
2. **A.** Turn 2 1/2 into 5/2. Turn 2 1/2 into 5/2 first. Every number has to be a fraction before you use Keep, Change, Flip.
3. **D.** 9/2 × 4/3. 9/2 ÷ 3/4 = 9/2 × 4/3. Keep the first fraction, change ÷ to ×, and flip the divisor.
4. **B.** 12. 9 ÷ 3/4 = 9/1 × 4/3 = 36/3 = 12.
5. **A.** 2. 1 1/2 = 3/2, so 3/2 ÷ 3/4 = 3/2 × 4/3 = 12/6 = 2.

Talk about it

How did you change the mixed number into a fraction, and how many groups did you circle?

Home mission

Pretend 21 coins or beans are the quarter-cups in 5 1/4 cups of flour. Each mini-loaf takes 3 of them. Make groups of 3. How many loaves? Say why 21 quarters equal 5 1/4 cups.

When they are stuck, ask

- Is every number in this problem a fraction yet?
- How do we turn a mixed number into a fraction?
- Which fraction do we flip?

Try not to say

- You can flip a mixed number directly.
- Whole numbers do not need to be changed.
- Flip the first fraction, it is the same thing.
