The Distributive Property

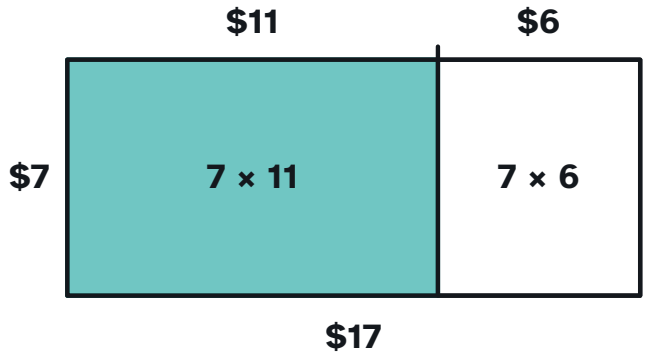
Show that the factored and expanded forms are equal when you total identical kits.

Name _____ **Date** _____

Tonight's spark

Seven band-camp rooms each need an $11 music stand and a $6 tuner. The teacher finds the total two ways. One starts with one room. The other starts with all the stands. Will they match?

Guess first: is the total more or less than $100?



Our class model: two ways, same total

Try it

Work it out on paper. Write one answer on each line.

1 **Each kit has a $4 stand and a $2 clip. Which expression gives the cost of 3 kits?**

A. 3(4 + 2) **B.** 3 × 4 + 2 **C.** 3 + 4 + 2 **D.** 3(4 × 2)

My answer _____

2 **What is 5(6 + 3)?**

A. 33 **B.** 14 **C.** 45 **D.** 90

My answer _____

3 **Which expression is equal to 7 × 4 + 7 × 5?**

A. 7(4 + 5) **B.** 7(4 × 5) **C.** (7 + 7)(4 + 5) **D.** 7 + (4 + 5)

My answer _____

4 **Expand 8(a + 2).**

A. 8a + 2 **B.** 10a **C.** a + 16 **D.** 8a + 16

My answer _____

5 **6 bags each get a $4 notebook and a $3 pen. What is the total cost?**

A. $27 **B.** $42 **C.** $13

My answer _____

Talk about it

Do both ways give the same total? Which way was easier for you, and why?

Home mission

A different situation: pretend you buy 5 snack packs. Each pack has a $3 box of crackers and a $2 juice. Say the cost two ways out loud. Try 5(3 + 2) and 5 × 3 + 5 × 2. Which way is easier in your head?

If we get stuck, ask

- Did the outside number reach both things inside?
- What does one kit cost? Now how many kits?
- Can you get the same total the other way?

Do it on a screen

Scan or type the link. Same lesson, with hints.
