Write and Evaluate Numerical Expressions with Exponents

Evaluate expressions with grouping symbols, powers and arithmetic in one order.

Name _____ **Date** _____

Tonight's spark

A rec-center game gives you 4 points to start. Then you play 3 bonus rounds. Each bonus round is worth $(9 - 7)^2$ points. What is your final score?

Make a guess first: is the final score more or less than 10?

Step	Expression
Start	$4+3\times(9-7)^2$
Parentheses	$4+3\times2^2$
Power	$4+3\times4$
Multiply	$4+12$
Add	16

Our class model: rewrite after every step

Try it

Work it out on paper. Write one answer on each line.

1 **In 5 × (2 + 4), which do you do first?**

A. Multiply 5 × 2 **B.** Multiply 5 × 4 **C.** Add 5 + 2 **D.** Add 2 + 4

My answer _____

2 **What is (8 − 3) × 2?**

A. 2 **B.** 10 **C.** 13

My answer _____

3 **What is $(6 + 2)^2$?**

A. 64 **B.** 40 **C.** 10 **D.** 16

My answer _____

4 **What is $20 - (3 + 1)^2$?**

A. 18 **B.** 16 **C.** 4 **D.** 256

My answer _____

5 **What is $2 + 3 \times (5 - 1)$?**

A. 20 **B.** 14 **C.** 16

My answer _____

6 **What is $6 + 2 \times (7 - 4)^2$?**

A. 72 **B.** 42 **C.** 12 **D.** 24

My answer _____

Talk about it

What did you do first, second and third, and why does that order give only one answer?

Home mission

Make a game score at the table. Start with 6 points, then add 2 rounds worth $(6 - 3)^2$ points each. Ask your student to say the expression and rewrite it after every step.

If we get stuck, ask

- What step comes first, and why?
- Can you rewrite the whole expression after that step?
- These two operations have the same rank — which way do we go?

Do it on a screen

Scan or type the link. Same lesson, with hints.
