Answers and talk notes

Ordered Pairs in All Four Quadrants

What your student is learning

Tonight we name a point's quadrant from its SIGNS alone — without plotting it at all.

Answers

Ask your student to explain before you look.

1. **D.** (+, –). 3 is positive and –8 is negative, so the signs are (+, –).
2. **A.** Quadrant I. (+, +) is Quadrant I, the upper right.
3. **B.** Quadrant II. The signs are (–, +), so it is in Quadrant II.
4. **C.** Quadrant III. The signs are (–, –), so it is in Quadrant III.
5. **C.** (–3, –4). Quadrant III has signs (–, –), and (–3, –4) matches.

Talk about it

What are the two signs? Which quadrant do those signs name?

Home mission

Fold a sheet of paper in half, then in half the other way. The folds cross in the middle. Say only the signs, like (–, +). Can your student point to the right part of the paper? Try (+, –), then (–, –).

When they are stuck, ask

- Does the first number send you left or right?
- Does the second number send you up or down?
- Which corner of the grid is that?

Try not to say

- A negative first number means move down.
- You always have to plot it to know the quadrant.
- Quadrant numbers go clockwise.
