

LESSON 3-3 • SESSION 1 • GUIDED NOTES**Equivalent Ratios and Tables**

Learning target – I can build a ratio table by scaling both rows by the same factor. · 6.RP.A.3a

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
equivalent ratios <i>razones equivalentes</i>	Ratios that make the same _____.	2 : 3 and 4 : 6
ratio table <i>tabla de razones</i>	A table of _____ ratios. Each column is one pair.	3 : 2, 6 : 4, 9 : 6
scale factor <i>factor de escala</i>	The number you _____ or divide both terms by.	2 : 3 $\times$ 4 = 8 : 12

KEY IDEA*complete each sentence*

- To find an equivalent ratio, multiply or divide _____ terms by the _____ number.
- Adding the same number to both terms does _____ keep the ratio.

WORKED EXAMPLE*fill in the blanks as we solve*

A drink mix uses 5 scoops of powder for every 2 cups of water. How much water goes with 15 scoops?

Step 1 Find the scale factor: $15 \div 5 = \underline{\hspace{1cm}}$.**Step 2** Multiply the water by the same factor: $2 \times 3 = \underline{\hspace{1cm}}$.**Step 3** Check: 15 : 6 divided by 3 gives _____ again.**Answer** **15 scoops of powder go with _____ cups of water.****YOU TRY***use the example as a model*

1. Juice uses 1 cup of concentrate for every 4 cups of water. Complete the table.

Concentrate (cups)	1	2	3	5
Water (cups)	4			

2. Fill in the missing number.

a. $5 : 2 = 20 : \underline{\hspace{1cm}}$

b. $6 : 9 = 2 : \underline{\hspace{1cm}}$

SUM IT UP*in your own words*

To build a ratio table, I _____ both rows by the same number so that _____.

LESSON 3-3 • SESSION 2 • GUIDED NOTES**The Bridge Strategy (Scaling Ratios)**

Learning target – I can use the bridge strategy to scale a ratio when I cannot multiply by a whole number. · 6.RP.A.3a

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
bridge ratio <i>razón puente</i>	A _____ equivalent ratio you build first, then scale up.	$8 : 20 = 2 : 5$
simplify <i>simplificar</i>	Divide both terms by the _____ number.	$8 : 20 \div 4 = 2 : 5$
greatest common factor <i>máximo común divisor</i>	The _____ number that divides both terms.	GCF of 8 and 20 is 4

KEY IDEA*complete each sentence*

- When no whole number takes you to the target, _____ both terms down to a bridge ratio.
- Then _____ both terms of the bridge up to the target.

WORKED EXAMPLE*fill in the blanks as we solve*

A trail mix uses 6 cups of nuts for every 8 cups of raisins. How many cups of raisins go with 15 cups of nuts?

Step 1 $6 \times$ a whole number never equals ____.**Step 2** Divide both terms by 2: $6 : 8$ becomes _____.**Step 3** Multiply both terms by 5: $3 : 4$ becomes $15 : \underline{\hspace{1cm}}$.**Answer** **15 cups of nuts go with ____ cups of raisins.****YOU TRY***use the example as a model*

1. A glaze uses 8 spoons of honey for every 20 spoons of water. How much water goes with 14 spoons of honey?

*Show your work.***Answer** _____ spoons

2. Use a bridge to find the missing number.

a. $6 : 9 = 10 : \underline{\hspace{1cm}}$

b. $12 : 16 = 9 : \underline{\hspace{1cm}}$

SUM IT UP*in your own words**I use a bridge ratio when _____, and I check my answer by _____.*
