

LESSON 9-2 • SESSION 1 • GUIDED NOTES**From Table to Graph**

Learning target – I can turn a table of values into points and plot them on a graph. · 6.EE.C.9

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
ordered pair <i>par ordenado</i>	Two numbers (x, y) that tell where a _____ is.	$(3, 12)$
coordinates <i>coordenadas</i>	The _____ numbers in an ordered pair.	x-coordinate 3, y-coordinate 12
axis <i>eje</i>	One of the two _____ on a graph.	x-axis across, y-axis up
plot <i>marcar</i>	To _____ a point on a graph.	right 3, up 12

KEY IDEA*complete each sentence*

- Each row of a table becomes an ordered pair: x _____, then y .
- To plot (x, y) , start at $(0, 0)$. Move _____ x , then _____ y .

WORKED EXAMPLE*fill in the blanks as we solve*Plot the table for $y = 4x$ with $x = 1, 2, 3$.**Step 1** The rows become $(\underline{\hspace{1cm}}, 4)$, $(2, \underline{\hspace{1cm}})$ and $(3, 12)$.**Step 2** Plot $(1, 4)$: right 1, then up _____.**Answer** The points line up in a _____ line.**YOU TRY***use the example as a model***1.** Write the ordered pairs for $y = 6x$.**a.** $x = 1$ _____**b.** $x = 2$ _____**c.** $x = 4$ _____**2.** Plot the points $(1, 3)$, $(2, 6)$ and $(4, 12)$. What shape do they make?

Shape _____

**SUM IT UP***in your own words*

To turn a table into a graph, I _____, and I know the order matters because _____.

LESSON 9-2 • SESSION 2 • GUIDED NOTES

Analyzing a Graph

Learning target – I can read a relationship off a graph and describe the rate it shows. · 6.EE.C.9

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
rate of change <i>tasa de cambio</i>	How much y changes when x goes up by ____.	up \$4 per hour
unit rate <i>tasa unitaria</i>	The amount of y for ____ unit of x .	60 miles per hour
origin <i>origen</i>	The point _____, where the two axes cross.	(0, 0)
steeper <i>más empinada</i>	A line that rises _____ as you move right.	up 9 per hour beats up 2

KEY IDEA*complete each sentence*

- Rate of change = change in y ____ change in x .
- If a line goes through (0, 0), divide ____ by x for any point on it.

WORKED EXAMPLE*fill in the blanks as we solve*A graph of hours (x) and dollars (y) passes through (2, 6) and (5, 15). Find the rate.**Step 1** Change in y : $15 - 6 =$ ____ dollars.**Step 2** Change in x : $5 - 2 =$ ____ hours.**Step 3** Divide: $9 \div 3 =$ ____.**Answer** The rate is \$____ per hour.**YOU TRY***use the example as a model*

- A line passes through (0, 0) and the point. Find the unit rate.
 - (4, 20) _____
 - (6, 42) _____
- A graph of hours (x) and miles (y) passes through (2, 8) and (5, 20). Find the rate. Then find the miles at 9 hours.

Show your work.

Rate; miles _____

SUM IT UP*in your own words*

A steeper line means ____ because ____.
