

LESSON 9-3 • SESSION 1 • GUIDED NOTES**Equations from Tables**

Learning target – I can write an equation that matches a table of values. • 6.EE.C.9

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
equation <i>ecuación</i>	A math sentence with an ____ sign.	$y = 5x$
constant <i>constante</i>	A number that ____ changes.	the 5 in $y = 5x$
rate <i>tasa</i>	The amount for ____ one unit.	\$3 for each pound

KEY IDEA*complete each sentence*

- If $y \div x$ is the ____ in every row, the equation is $y = (\text{that number}) \times x$.
- If $y - x$ is the same in every row, the equation is $y = x + (\text{that number})$.
- Check the equation with ____ rows.

WORKED EXAMPLE*fill in the blanks as we solve*

Write an equation for the pairs (1, 6), (2, 12) and (5, 30).

Step 1 $6 \div 1 = \underline{\quad}$, $12 \div 2 = \underline{\quad}$, $30 \div 5 = \underline{\quad}$ **Step 2** The rate is ____ in every row.**Answer** $y = \underline{\quad}$. **Check:** $6 \times 5 = 30$.**YOU TRY***use the example as a model*

1. Write an equation for each table.

a. x : 2, 4, 6 y : 10, 20, 30 $y = \underline{\quad}$ **b.** x : 1, 2, 3 y : 9, 10, 11 $y = \underline{\quad}$

2. A table shows x : 3, 5, 8 and y : 24, 40, 64. Write the equation. Then find y when $x = 12$.

*Show your work.***Equation; y** _____**SUM IT UP***in your own words*

To write an equation from a table, I ____ and I check it by ____.

LESSON 9-3 • SESSION 2 • GUIDED NOTES**Equations from Situations**

Learning target – I can write an equation from a described situation and identify its variables. • 6.EE.C.9

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
unit rate <i>tasa unitaria</i>	The amount for exactly ___ unit.	\$4 for each hour
multiplicative rule <i>regla multiplicativa</i>	_____ the input by the same number.	$y = 6x$
additive rule <i>regla aditiva</i>	_____ the same number to the input.	$y = x + 6$
per <i>por</i>	Means “for _____ one.”	25 miles per gallon

KEY IDEA*complete each sentence*

- A rate (“each,” “per”) _____ the variable.
- A one-time fee or a starting amount is _____ once.

WORKED EXAMPLE*fill in the blanks as we solve*A pet sitter earns \$9 each day. Write an equation for the dollars e earned in d days.**Step 1** Define the letters: d = days, e = _____.**Step 2** The rate is \$9 for each _____, so e = _____.**Answer** **Test $d = 5$: $e = 9 \times 5 =$ _____ dollars.****YOU TRY***use the example as a model***1.** Write an equation for each situation.**a.** Each box holds 8 pens. Pens p in b boxes: $p =$ _____**b.** A gym costs \$10 to join plus \$20 a month. Cost c for m months: $c =$ _____**2.** Devin earns \$13 for each lawn he mows. Write an equation for his pay p for n lawns. Find his pay for 6 lawns.*Show your work.***Equation; pay** _____**SUM IT UP***in your own words**In my equation, the rate goes _____, and a one-time fee goes _____.*
