

LESSON 9-4 • SESSION 1 • GUIDED NOTES**Substitute and Solve**

Learning target – I can substitute a value into an equation to find the matching output. • 6.EE.C.9

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
substitute <i>sustituir</i>	Put a known number in _____ of a letter.	put 8 in for x
order of operations <i>orden de las operaciones</i>	_____ first, then add or subtract.	$3 \times 4 + 10 = 22$
reasonable <i>razonable</i>	Makes _____ for the story.	17 days, not 17 years

KEY IDEA*complete each sentence*

- To find an output, _____ the input for the variable.
- With a fee, _____ first, then add the fee.

WORKED EXAMPLE*fill in the blanks as we solve*A bakery makes 24 rolls each hour, so $r = 24h$. Is 5 hours enough for an order of 150 rolls?**Step 1** Substitute $h = 5$: $r = 24 \times \underline{\hspace{1cm}}$.**Step 2** Multiply: $r = \underline{\hspace{1cm}}$ rolls.**Step 3** Compare: $120 \underline{\hspace{1cm}}$ 150.**Answer** , 5 hours makes only 120 rolls.**YOU TRY***use the example as a model***1.** Substitute to find y .

a. $y = 4x + 7$; $x = 6$ _____

b. $y = 12x$; $x = 9$ _____

2. A rental costs $c = 8h + 15$ dollars for h hours. Find the cost for 5 hours.*Show your work.***Answer** _____ dollars**SUM IT UP***in your own words*

When I substitute into an equation with a fee, I _____ before I _____.

LESSON 9-4 • SESSION 2 • GUIDED NOTES

Working Backward to a Goal

Learning target – I can work backward from a goal to find the input an equation needs. • 6.EE.C.9

WORDS TO KNOW*fill in the missing words*

WORD	WHAT IT MEANS	EXAMPLE
work backward <i>trabajar hacia atrás</i>	Start with the ____ and undo the steps.	goal first, then divide
inverse operation <i>operación inversa</i>	An action that ____ another action.	$\div$ undoes $\times$
at least <i>al menos</i>	That number ____.	at least 42 cars

KEY IDEA*complete each sentence*

- Put the goal in place of the _____, then solve for the input.
- With a fee, _____ the fee first, then divide by the rate.
- If only whole items make sense, round ____ to reach the goal.

WORKED EXAMPLE*fill in the blanks as we solve*

Tickets cost \$6. A club needs at least \$100. How many tickets must it sell?

Step 1 Put in the goal: $100 = __n$.**Step 2** Divide: $100 \div 6 \approx __$.**Step 3** 16 tickets make \$96 (too low); ____ tickets make \$102.**Answer** The club must sell ____ tickets.**YOU TRY***use the example as a model***1.** Solve for x .

a. $11x = 528$ _____

b. $4x + 10 = 50$ _____

2. A van holds 8 students. 60 students are going on a trip. How many vans are needed?*Show your work.***Answer** _____ vans**SUM IT UP***in your own words*

When I work backward with a fee, I ____ first because ____.
