**UNIT 2 · STANDARD 6.NOS.3**

# Multiply Decimals

Lesson 2-12 · Teacher Copy

**Name:** Type your name **Date:** Today's date **Class:** Class period

## My Notes Level 1 Support

🎯 **TODAY'S OBJECTIVES**

**Content Objective: I can multiply decimals and place the decimal point correctly in the product.**

**Language Objective: I can explain my work using the words product, decimal point, estimate, and decimal places.**

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Product | Decimal point | Estimate | Place value | Decimal places

☝️ *Tap any word to see its meaning and a picture.*

1. The answer to a multiplication problem is the _____.

2. The dot that separates whole numbers from parts of a whole is the _____.

3. Finding an answer that is close but not exact, to check if a product is reasonable, is to _____.

4. The value a digit has based on its position is its _____.

5. To place the point in a product, I count the total number of _____ in both factors.

## Write About the Math

**How do you multiply decimals to find the total cost? How can estimation help you check?**
***¿Cómo multiplicas decimales para hallar el costo total? ¿Cómo te puede ayudar estimar a comprobarlo?***

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Product** — *Producto*
- ☐ **Decimal point** — *Punto decimal*
- ☐ **Estimate** — *Estimar*
- ☐ **Place value** — *Valor posicional*
- ☐ **Decimal places** — *Cifras decimales*

**Model:** *Rounding the factors gives a reasonable estimate of the product.* — Students round to about 5 × $13 = $65 (or 4 × $13) to predict the cost is in the $50-$65 range, naming 4.5 and 12.60 as the factors.

### Start

Complete the frames. Use the word bank.
*Completa las oraciones. Usa el banco de palabras.*

- **The total cost is $____ because 3.5 × $6.80 = $____, and I can estimate by rounding to ____ × ____ = ____.**
- **My answer is ____ because ____.**
  *Mi respuesta es ____ porque ____.*

### Build

Write two connected sentences. Use because, so, or but.
*Escribe dos oraciones conectadas. Usa porque, entonces o pero.*

- **My claim is ____.**
  *Mi afirmación es ____.*
- **My evidence is ____, so ____.**
  *Mi evidencia es ____, entonces ____.*

## Explain

Write a claim, give math evidence, and explain your reasoning.

*Escribe una afirmación, da evidencia matemática y explica tu razonamiento.*

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.

## Writing Guide — Teacher Copy

- The answer to the math question is correct.
- The evidence is real lesson mathematics (numbers, equation, or model), not restated claim.
- The support level changed the language scaffolding, never the mathematical expectation.

## Answer Key & Teacher Guide

1. **Notes 1:** Product
2. **Notes 2:** Decimal point
3. **Notes 3:** Estimate
4. **Notes 4:** Place value
5. **Notes 5:** Decimal places
6. **Watch for this mistake:** *A common mistake in Multiply Decimals is counting decimal places from only one factor instead of adding the decimal places from BOTH factors. For example, in 0.4 × 0.06, a student multiplies 4 × 6 = 24, then places the decimal point using just one factor's place count (1 place), writing 0.24 instead of the correct answer: 0.4 has 1 decimal place and 0.06 has 2 decimal places, for a total of 3, so 24 becomes 0.024. Before you submit, count the decimal places in EACH factor separately and add them together — that total is how many decimal places belong in your final answer.*
7. **Try It 1:** B. $0.24 — *6 × 4 = 24. There are 2 total decimal places (1 + 1), so 0.6 × 0.4 = 0.24, which is $0.24.*
8. **Try It 2:** B. $3.00 — *25 × 12 = 300. There are 2 total decimal places (1 + 1), so 2.5 × 1.2 = 3.00 = $3.00.*
