UNIT 3 · STANDARD 6.AT.3

Ratio Reasoning: Convert Measurements within the Same System

Lesson 3-6

Name: Type your name **Date:** Today's date **Class:** Class period

My Notes Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can use ratio reasoning to convert between units within the same measurement system.

Language Objective: I can explain a conversion using the words unit ratio, convert, measurement system, and per.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Conversion factor | Unit ratio | Convert | Measurement system | Double number line | Ratio table | Customary units | Metric units

☝️ *Tap any word to see its meaning and a picture.*

Level 3: try the blanks from memory first, then check the bank.

1. The ratio that trades one unit for another is a _____ _____.

2. A ratio comparing an amount to exactly _____ unit is a unit ratio.

3. To change a measurement to another unit without changing the amount is to _____.

4. Inches and feet belong to the customary _____ _____; centimeters and meters to the metric one.

5 Two lines whose matching ticks show the same amount in two units form a _____ _____ _____.

6 A table whose every column holds the same comparison is a _____ _____.

7 Inches, feet, pounds, and gallons are _____.

8 Meters, grams, and liters are _____.

Write About the Math

How many cup-scoops of broth does the recipe need, and how do you know?

¿Cuántas tazas de caldo necesita la receta y cómo lo sabes?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Conversion factor** — *Factor de conversión*
- ☐ **Unit ratio** — *Razón unitaria*
- ☐ **Convert** — *Convertir*
- ☐ **Measurement system** — *Sistema de medidas*
- ☐ **Double number line** — *Recta numérica doble*

Model: *Find the scale factor (120 divided by 8 = 15), then multiply each ingredient by it.* — Students find the scale factor of 15 and explain that multiplying both ingredients by 15 keeps the recipe proportional (5 cups tomatoes becomes 75, 3 cups mozzarella becomes 45).

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The unit ratio is ____ cups to 1 quart. Cups are ____ than quarts, so I ____ to convert. 3 × 4 = ____ cups. The amount of broth did not change — only the ____ did.**
- **My answer is ____ because ____.**
  Mi respuesta es ____ porque ____.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ____.**
  Mi afirmación es ____.
- **My evidence is ____, so ____.**
  Mi evidencia es ____, entonces ____.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.
