UNIT 5 · STANDARD 6.GR.1

Determine the Area of Parallelograms and Rhombuses

Lesson 5-1

Name: Type your name **Date:** Today's date **Class:** Class period

My Notes Level 3 Enrichment

🎯 **TODAY'S OBJECTIVES**

Content Objective: I can find the area of a parallelogram using base × height.

Language Objective: I can explain how I found the area using the words base, height, area, and formula.

📖 See **Learn It** for the explanation and worked examples, and the **Vocab** tab for the words. These are your notes to fill in and keep.

✏️ **Fill in each blank as we go. Use the Word Bank to help you.**

📚 **WORD BANK — FILL EACH BLANK WITH THE BEST WORD**

Slanted side | Parallelogram | Parallel | Base | Height | Perpendicular | Area | Composite figure | Formula | Rhombus | Diagonal

☝️ *Tap any word to see its meaning and a picture.*

Level 3: try the blanks from memory first, then check the bank.

1. The leaning side of a parallelogram, which is NOT the height, is the _____.

2. A quadrilateral with two pairs of parallel sides is a _____.

3. Two sides that stay the same distance apart and never meet are _____.

4. The side of a parallelogram you measure the height from at a 90° angle is the _____.

5 The perpendicular distance between the base and the opposite side is the _____.

6 Two lines that meet at a 90° square corner are _____.

7 The amount of flat space inside a two-dimensional figure is its _____.

8 A shape made of two or more basic shapes combined is a _____.

9 A math rule written with symbols, like $A = b \times h$, is a _____.

10 A parallelogram whose four sides are all the same length is a _____.

11 A segment from one corner to the opposite corner is a _____.

Write About the Math

How many tiles does the architect need?
¿Cuántos azulejos necesita el arquitecto?

Say your answer to a partner first. Then write it, using at least two of these words:

- ☐ **Slanted side** — *Lado inclinado*
- ☐ **Parallelogram** — *Paralelogramo*
- ☐ **Parallel** — *Paralelas*
- ☐ **Base** — *Base*
- ☐ **Height** — *Altura*

Model: *We use the height because it is perpendicular to the base.* — Students connect 'height' to the perpendicular (straight-up) distance from base to top, and recognize the slanted side is longer and would overstate the area.

Start

Complete the frames. Use the word bank.

Completa las oraciones. Usa el banco de palabras.

- **The courtyard's area is ____ sq ft because A = ____ x ____ . She needs ____ tiles because ____ / 2 = ____.**
- **My answer is ____ because ____.**
  Mi respuesta es ____ porque ____.

Build

Write two connected sentences. Use because, so, or but.

Escribe dos oraciones conectadas. Usa porque, entonces o pero.

- **My claim is ____.**
  Mi afirmación es ____.
- **My evidence is ____, so ____.**
  Mi evidencia es ____, entonces ____.

Explain

Write a claim, give math evidence, and explain your reasoning.

Escribe una afirmación, da evidencia matemática y explica tu razonamiento.

- [ ] I answered the question.
- [ ] I used math evidence: numbers, an equation, or a model.
- [ ] I used at least two math words.
