

Divide Whole Numbers by Fractions

Lesson 2-2

Name: _____

Date: _____

Class: _____

Key Vocabulary

Level 1 support

Picture first, then the word, then a plain-language meaning. Say each word out loud.

4 is a whole number; as a fraction it is $4/1$

Whole Number

A counting number with no fraction or decimal, like 0, 1, 2, 3.

$1/2$ means 1 out of 2 equal parts — like cutting a sandwich in half and taking one piece

Fraction

A number that shows part of a whole, like $3/4$.

$$3/4 \rightarrow 4/3$$

flip top and bottom

The reciprocal of $2/3$ is $3/2$. Flip the fraction to divide: $6 \div 2/3 = 6 \times 3/2$

Reciprocal

A fraction turned upside down.

$$3/4 \rightarrow 4/3$$

flip top and bottom

$6 \div 1/3 \rightarrow$ Keep 6, Change $\div$ to $\times$, Flip $1/3$ to $3/1 \rightarrow 6 \times 3 = 18$

Keep, Change, Flip

A way to divide fractions: keep the first, change $\div$ to $\times$, flip the second.

$$12 \div 3 = 4$$

In $4 \div 1/2 = 8$, the quotient is 8

Quotient

The answer when you divide.

Key Ideas & Notes

WHAT WE'RE LEARNING TODAY

I can divide a whole number by a fraction by multiplying by the reciprocal.

1 Notice

Agent Park has 4 pounds of evidence powder.

2 Key idea

I can divide a whole number by a fraction by multiplying by the reciprocal.

3 Words I'll use

Whole Number

Fraction

Reciprocal

Keep, Change, Flip

Quotient

Think About It

- How much total powder does Agent Park have?
- How much goes into each bag?
- Will the number of bags be more or less than 4?

See the notes in action: watch one worked all the way through, then try the next with the same steps.

I do — watch

Follow each step as your teacher solves it.

Problem: What is $6 \div \frac{1}{3}$?

- A. 18
- B. 2
- C. $\frac{6}{3}$
- D. 3

Step 1 $6 \div \frac{1}{3} = 6 \times \frac{3}{1} = 18$.

Step 2 There are 18 thirds in 6 wholes.

Answer: A. 18

 We do — together

Solve this one with your class using the same steps.

Problem: What is $3 \div \frac{1}{5}$?

- A. 15
- B. $\frac{3}{5}$
- C. $\frac{5}{3}$
- D. 8

Step 1

Step 2

Answer:

 You do — your turn

Now try one on your own. Show every step.

Problem: What is $10 \div \frac{1}{4}$?

- A. 40
- B. 2.5
- C. 14
- D. $\frac{10}{4}$

Turn & Talk — Discussion Points

Level 1 support

Level 2

Talk with a partner about each prompt. If you need help getting started, use the Level 1 sentence stems. Ready for more? Try the Level 2 question.

LAUNCH

Agent Park has 4 pounds of evidence powder and fills bags that hold $\frac{1}{2}$ pound each. How many bags can he fill, and how do you know?

Level 1 support

Start here: Each whole pound makes 2 half-pound bags, so 4 pounds makes 8 bags.

 **Need a hint?**

Sentence starters (optional)

$\frac{1}{2}$ pound fits into 4 pounds a total of ____ times.

$\frac{1}{2}$ libra cabe en 4 libras un total de ____ veces.

I know because each pound holds ____ bags, so ____.

Lo sé porque cada libra contiene ____ bolsas, así que ____.

Word bank: whole number fraction quotient

Listen for: Students see that $4 \div \frac{1}{2} = 8$ and explain there are 2 halves in each whole pound.

Level 2

Why does dividing 4 by $\frac{1}{2}$ give 8, a number larger than 4, even though you are dividing? Justify.

- Dividing 4 by $\frac{1}{2}$ makes the answer larger because ____.
- Dividing by less than one whole means ____.

EXPLORE

How does 'Keep, Change, Flip' turn $6 \div 1/3$ into a multiplication problem?

Level 1 support

Start here: I keep the 6, change $\div$ to $\times$, and flip $1/3$ to its reciprocal 3.

Need a hint?

Sentence starters (optional)

I keep ____, change the sign to ____, and flip ____ to ____.

Mantengo ____, cambio el signo a ____, y volteo ____ a ____.

So $6 \div 1/3$ becomes $6 \times$ ____, which equals ____.

Entonces $6 \div 1/3$ se convierte en $6 \times$ ____, que es igual a ____.

Word bank: reciprocal Keep, Change, Flip quotient

Listen for: Students correctly flip the divisor to its reciprocal (3) and explain multiplying by the reciprocal gives the same result as dividing.

Level 2

Explain why multiplying by the reciprocal gives the same answer as counting how many $1/3$ -pieces fit into 6.

- Multiplying by the reciprocal works because ____.
- Both methods give ____ because ____.

CONNECT

When would dividing a whole number by a fraction help you in real life?

Level 1 support

Start here: It tells you how many fraction-size portions fit into a whole amount.

Need a hint?

Sentence starters (optional)

Dividing a whole number by a fraction is useful when ____.

Dividir un número entero entre una fracción es útil cuando ____.

For example, ____ pounds split into ____-pound portions makes ____.

Por ejemplo, ____ libras divididas en porciones de ____ libra hace ____.

Word bank: **whole number** **fraction** **reciprocal**

Listen for: Students give a realistic portion/serving scenario and set it up as $\text{whole} \div \text{fraction}$.

Level 2

A student says you should always multiply by the reciprocal to make the answer bigger.

Critique this overgeneralization.

- This is not always true because ____.
- Multiplying by a reciprocal makes the answer bigger only when ____.

Write About the Math

The Writing Revolution

I can explain my steps using the words fraction, reciprocal, quotient, and Keep, Change, Flip.

1. Kernel Sentence subject + verb

Model: Whole Number is a counting number with no fraction or decimal, like 0, 1, 2, 3.

Número entero es un número de contar sin fracción ni decimal, como 0, 1, 2, 3.

Write a kernel sentence about whole number. Use a subject and a verb.

Escribe una oración base sobre número entero. Usa un sujeto y un verbo.

2. Sentence Expansion because · but · so

Kernel: Whole Number matters in math

Número entero importa en matemáticas

Expand the kernel three ways. Add a reason, a contrast, and a result.

because
porque

Whole Number matters in math because ____.

Número entero importa en matemáticas porque ____.

but
pero

Whole Number matters in math, but ____.

Número entero importa en matemáticas, pero ____.

so
entonces

Whole Number matters in math, so ____.

Número entero importa en matemáticas, entonces ____.

3. Sentence Types 4 ways to write a math idea

Statement *Afirmación*

Tell one true fact about whole number.

Di un hecho verdadero sobre whole number.

Whole number ____.

Question *Pregunta*

Ask a question about whole number.

Haz una pregunta sobre whole number.

How does ____ ?

¿Cómo ____ ?

Exclamation *Exclamación*

Show excitement about whole number.

Muestra entusiasmo sobre whole number.

Wow, ____ !

¡Guau, ____ !

Command *Mandato*

Tell a partner what to do with whole number.

Dile a un compañero qué hacer con whole number.

First, ____ .

Primero, ____ .

4. Explain Your Reasoning use a sentence starter

1/2 pound fits into 4 pounds a total of ____ times.

1/2 libra cabe en 4 libras un total de ____ veces.

I know because each pound holds ____ bags, so ____.

Lo sé porque cada libra contiene ____ bolsas, así que ____.

I keep ____, change the sign to ____, and flip ____ to ____.

Mantengo ____, cambio el signo a ____, y volteo ____ a ____.

Try It

Solve on your own. Check the answer key when you are done.

1. A 6-foot board is cut into $\frac{3}{4}$ -foot pieces. How many pieces?

- A. 8
- B. 4
- C. 9
- D. 18

Show your work:

2. What is $10 \div (\frac{5}{6})$?

- A. 12
- B. 2
- C. 60
- D. 8

Show your work:

Stretch Your Thinking

Level 2 enrichment

Challenge task — explain your reasoning in full sentences.

A pizza shop has 8 whole pizzas. Each serving is $\frac{2}{3}$ of a pizza. How many servings can they make? Write and solve an equation, then explain why the answer is greater than 8.

Sentence starter: The equation is $8 \div \frac{2}{3} = \underline{\hspace{1cm}}$. Using Keep, Change, Flip: $8 \times \frac{3}{2} = \underline{\hspace{1cm}}$. The answer is greater than 8 because $\underline{\hspace{1cm}}$.

Show your work:

Reflect — Exit Ticket

What is $9 \div \frac{1}{3}$?

- A. 27
- B. 3
- C. $\frac{9}{3}$
- D. $\frac{1}{27}$

Your answer:

Answer Key & Teacher Guide

1. **We Try (notes):** A. $15 - 3 \div 1/5 = 3 \times 5/1 = 15$. *There are 15 fifths in 3 wholes.*
2. **You Try (notes):** A. $40 - 10 \div 1/4 = 10 \times 4/1 = 40$. *There are 40 quarter-size pieces in 10 wholes.*
3. **Try It 1:** A. $8 - 6 \div (3/4) = 6 \times (4/3) = 24/3 = 8$ pieces.
4. **Try It 2:** A. $12 - 10 \div (5/6) = 10 \times (6/5) = 60/5 = 12$.
5. **Exit Ticket:** A. $27 - 9 \div 1/3 = 9 \times 3/1 = 27$. *There are 27 thirds in 9 wholes.*

Writing (TWR) — what to look for

- **Kernel sentence:** A complete sentence needs a subject and a verb. Example: Whole Number is a counting number with no fraction or decimal, like 0, 1, 2, 3.
- **Expansion:** *because* gives a reason, *but* shows a contrast or exception, *so* shows a result. Answers vary; each must keep the kernel idea and add the correct kind of detail.
- **Sentence types:** Statement ends with a period, question with "?", exclamation with "!", and a command starts with an action verb (a "bossy" verb).
