

Fraction Division Problem Solving

Lesson 2-5

Name: _____ Date: _____ Class: _____

Key Vocabulary

Level 1 support

Picture first, then the word, then a plain-language meaning. Say each word out loud.

A bar model showing $3/4$ split into $1/8$ -size pieces, or the equation $3/4 \div 1/8 = 6$

Model

A picture or math way to show a problem so you can solve it.

$$x + 2 = 7$$

balanced with =

$3/4 \div 1/8 = 6$ — the left side (division) equals the right side (answer)

Equation

A math sentence with an equal sign showing both sides are the same.

$$x + 2 = 7$$

balanced with =

In $3/4 \div 1/8 = 6$, the solution is 6 portions

Solution

The answer to an equation or problem.

247

hundreds tens ones

$3 \div 1/4 = 12$. Is 12 reasonable? Yes, because $1/4$ is small so many pieces fit into 3.

Reasonableness

Checking if your answer makes sense.

$$x + 2 = 7$$

balanced with =

If $3/4 \div 1/8 = 6$, then $6 \times 1/8 = 6/8 = 3/4$.

Multiplication checks division.

Inverse operations

Two math actions that undo each other, like $\times$ and $\div$.

Key Ideas & Notes

WHAT WE'RE LEARNING TODAY

I can solve real-world problems by writing and solving fraction division equations.

1 Notice

Agent Torres is closing the biggest case of the year.

2 Key idea

I can solve real-world problems by writing and solving fraction division equations.

3 Words I'll use

Model

Equation

Solution

Reasonableness

Inverse operations

Think About It

- What is the total amount of fingerprint dust?
- How much does each test use?
- What operation will help solve this problem?

See the notes in action: watch one worked all the way through, then try the next with the same steps.

I do — watch

Follow each step as your teacher solves it.

Problem: A ribbon is $\frac{4}{5}$ of a yard long. Each bow uses $\frac{1}{10}$ of a yard. Which equation finds how many bows can be made?

A. $\frac{4}{5} \div \frac{1}{10}$

B. $\frac{1}{10} \div \frac{4}{5}$

C. $\frac{4}{5} \times \frac{1}{10}$

D. $\frac{4}{5} + \frac{1}{10}$

Step 1

The total ($\frac{4}{5}$ yard) is divided into groups of $\frac{1}{10}$ yard each.

Step 2

The equation is $\frac{4}{5} \div \frac{1}{10} = \frac{4}{5} \times \frac{10}{1} = \frac{40}{5} = 8$ bows.

Answer: A. $\frac{4}{5} \div \frac{1}{10}$

 We do — together

Solve this one with your class using the same steps.

Problem: A detective has $\frac{1}{2}$ gallon of solution. Each test uses $\frac{1}{8}$ gallon. How many tests can be run?

- A. 4
- B. $\frac{1}{16}$
- C. 16
- D. $\frac{1}{4}$

Step 1

Step 2

Answer:

 You do — your turn

Now try one on your own. Show every step.

Problem: A trail is $\frac{3}{4}$ mile long. A jogger runs laps of $\frac{1}{4}$ mile each. How many laps does the jogger complete?

- A. 3 laps
- B. $\frac{1}{3}$ lap
- C. 4 laps
- D. $\frac{3}{16}$ lap

Turn & Talk — Discussion Points

Level 1 support

Level 2

Talk with a partner about each prompt. If you need help getting started, use the Level 1 sentence stems. Ready for more? Try the Level 2 question.

LAUNCH

Agent Torres has $\frac{2}{3}$ gallon of fingerprint dust and each test uses $\frac{1}{6}$ gallon. How do you decide which number is the dividend and which is the divisor?

Level 1 support

Start here: The total amount is the dividend; the size of each test is the divisor.

Need a hint?

Sentence starters (optional)

The total, _____, is the dividend because _____.

El total, _____, es el dividendo porque _____.

The size of each test, _____, is the divisor because _____.

El tamaño de cada prueba, _____, es el divisor porque _____.

Word bank: equation model solution

Listen for: Students identify $\frac{2}{3}$ as the total being split (dividend) and $\frac{1}{6}$ as the group size (divisor), writing $\frac{2}{3} \div \frac{1}{6}$.

Level 2

Why would writing $\frac{1}{6} \div \frac{2}{3}$ instead give an unreasonable answer for this problem? Justify.

- Reversing the order is wrong because _____.
- The answer $\frac{1}{6} \div \frac{2}{3}$ would mean _____, which does not match the question.

EXPLORE**What clue in a word problem tells you to divide fractions instead of multiply?****Level 1 support**

Start here: Asking 'how many groups fit' signals division.

Need a hint?

Sentence starters (optional)

The problem asked me to find ____, so I divided.

El problema me pidió encontrar ____, así que dividí.

I divided rather than multiplied because ____.

Dividí en lugar de multiplicar porque ____.

Word bank: **equation** **solution** **reasonableness**

Listen for: Students point to 'how many fit / how many groups' language and contrast it with 'a fraction of' which signals multiplication.

Level 2

Write a multiplication word problem and a division word problem that both use $\frac{3}{4}$ and $\frac{1}{8}$, and explain the difference.

- My multiplication problem is ____.
- My division problem is ____, and the difference is ____.

REFLECT

How can you check that a fraction-division answer is reasonable?

Level 1 support

Start here: I can use inverse operations: the quotient times the divisor should equal the dividend.

Need a hint?

Sentence starters (optional)

I can check my answer by ____.

Puedo verificar mi respuesta al ____.

My answer is reasonable because ____.

Mi respuesta es razonable porque ____.

Word bank: **reasonableness** **inverse operations** **solution**

Listen for: *Students propose multiplying quotient by divisor to recover the dividend, or estimating to confirm the result makes sense.*

Level 2

A classmate got an answer smaller than the dividend when dividing by a fraction less than 1. Critique whether that can be correct.

- This answer cannot be right because ____.
- Dividing by a fraction less than one should give ____.

Write About the Math

The Writing Revolution

I can explain my reasoning using the words model, equation, solution, and reasonableness.

1. Kernel Sentence subject + verb

Model: Equation is a math sentence with an equal sign showing both sides are the same.
Ecuación es una oración matemática con un signo igual que muestra que ambos lados son iguales.

Write a kernel sentence about equation. Use a subject and a verb.

Escribe una oración base sobre ecuación. Usa un sujeto y un verbo.

2. Sentence Expansion because · but · so

Kernel: Equation matters in math
Ecuación importa en matemáticas

Expand the kernel three ways. Add a reason, a contrast, and a result.

because
porque

Equation matters in math because ____.
Ecuación importa en matemáticas porque ____.

but
pero

Equation matters in math, but ____.
Ecuación importa en matemáticas, pero ____.

so
entonces

Equation matters in math, so ____.
Ecuación importa en matemáticas, entonces ____.

3. Sentence Types 4 ways to write a math idea

Statement *Afirmación*

Tell one true fact about equation.

Di un hecho verdadero sobre equation.

Equation ____.

Question *Pregunta*

Ask a question about equation.

Haz una pregunta sobre equation.

How does ____ ?

¿Cómo ____ ?

Exclamation *Exclamación*

Show excitement about equation.

Muestra entusiasmo sobre equation.

Wow, ____ !

¡Guau, ____ !

Command *Mandato*

Tell a partner what to do with equation.

Dile a un compañero qué hacer con equation.

First, ____ .

Primero, ____ .

4. Explain Your Reasoning use a sentence starter

The total, ____ , is the dividend because ____ .

El total, ____ , es el dividendo porque ____ .

The size of each test, ____ , is the divisor because ____ .

El tamaño de cada prueba, ____ , es el divisor porque ____ .

The problem asked me to find ____ , so I divided.

El problema me pidió encontrar ____ , así que dividí.

| Try It

Solve on your own. Check the answer key when you are done.

1. A trail is $7\frac{1}{2}$ miles. A hiker rests every $1\frac{1}{4}$ miles. How many rest stops (not counting the start)?

- A. 6
- B. 5
- C. 7
- D. 8

Show your work:

2. You have $\frac{2}{3}$ of a pizza and split it into $\frac{1}{6}$ -pizza slices. How many slices?

- A. 4
- B. 3
- C. 6
- D. 2

Show your work:

Stretch Your Thinking

Level 2 enrichment

Challenge task — explain your reasoning in full sentences.

Write your own fraction division word problem where the answer is 8. Then show the equation, solve it step by step, and explain how you know your answer is reasonable.

Sentence starter: My word problem: _____. The equation is $\frac{\quad}{\quad} \div \frac{\quad}{\quad} = \frac{\quad}{\quad}$. I solved it using KCF: $\frac{\quad}{\quad} \times \frac{\quad}{\quad} = \frac{\quad}{\quad}$. The answer 8 is reasonable because _____.

Show your work:

Reflect — Exit Ticket

A pipe is $\frac{3}{4}$ meter long. Each connector piece is $\frac{3}{8}$ meter. How many connectors fit on the pipe?

- A. 2
- B. $\frac{9}{32}$
- C. $\frac{3}{2}$
- D. 6

Your answer:

Answer Key & Teacher Guide

1. **We Try (notes):** A. $4 - 1/2 \div 1/8 = 1/2 \times 8/1 = 8/2 = 4$ tests.
2. **You Try (notes):** A. 3 laps — $3/4 \div 1/4 = 3/4 \times 4/1 = 12/4 = 3$ laps. *This is reasonable: three 1/4-mile pieces fit into 3/4 mile.*
3. **Try It 1:** A. $6 - (15/2) \div (5/4) = (15/2) \times (4/5) = 60/10 = 6$ rest stops.
4. **Try It 2:** A. $4 - (2/3) \div (1/6) = (2/3) \times 6 = 12/3 = 4$ slices.
5. **Exit Ticket:** A. $2 - 3/4 \div 3/8 = 3/4 \times 8/3 = 24/12 = 2$. *Two connector pieces fit on the pipe.*

Writing (TWR) — what to look for

- **Kernel sentence:** A complete sentence needs a subject and a verb. Example: Equation is a math sentence with an equal sign showing both sides are the same.
- **Expansion:** *because* gives a reason, *but* shows a contrast or exception, *so* shows a result. Answers vary; each must keep the kernel idea and add the correct kind of detail.
- **Sentence types:** Statement ends with a period, question with "?", exclamation with "!", and a command starts with an action verb (a "bossy" verb).
